

ALLERGENA™

NET 2 FL. OZ. (60ml)

Fragrance

Allergy Relief from Fragrances, Smoke & Pollutants

- Homeopathic Sublingual Immunotherapy
- Builds a strong immune system to help fight allergies
- Alleviates runny nose, sneezing, congestion, sinus pressure, itchy & watery eyes
- No GMOs and No Gluten

People who have become odor-sensitive to perfumes, gasoline, car exhaust, pesticides and cigarette smoke will first develop allergy related symptoms.

Common symptoms from odor sensitivities include:

- *Burning or watery eyes*
- *Headaches*
- *Nasal congestion*
- *Coughing*
- *Hoarseness*
- *Shortness of breath presenting as a wheeze.*

Fragrances, tobacco and fireplace smoke and car exhaust fumes are environmental irritants. They put extra strain on your body and immune system which can trigger an allergic reaction. Existing illnesses like asthma and allergies can worsen when exposed to these environmental irritants.

A speck of cat dander floating through the air may not set off a reaction, but the addition of tobacco smoke may push your body to the limit and create a variety of allergy related symptoms.

You walk into a friend's home and smell freshly baked pumpkin pie. After you start sneezing uncontrollably, feeling dizzy and sick to your stomach you learn she hasn't been baking –she's burning a scented candle.

Wood smoke emissions contain carbon monoxide, nitrogen dioxide, sulfur dioxide, hydrochloric acid, and formaldehyde; and chemicals known or suspected to be carcinogens. Wood smoke can depress the immune system and damage the layers of cells in the lungs that protect and cleanse the airways.

Avoidance is the best method to prevent allergies caused by environmental irritants, but it may not be a practical solution.

Active Ingredients: Hydrastis canadensis 4X, Arnica montana 6X, Bovista 6X, Cicuta virosa 6X, Euphorbium officinarum 6X, Petroleum 6X, Calcarea carbonica 8X, Carbo vegetabilis 8X, Phosphorus 8X, Plumbum metallicum 8X, Sulfur 30X, a.a.

Inactive Ingredients: USP Demineralized Water & 20% USP Alcohol.

Frequently Asked Questions

How does Allergena Fragrance work?

The immune system defends us against disease. When harmful substances are detected, such as fragrances, the immune system creates antibodies, which destroy or neutralize allergens (i.e. fragrances, tobacco smoke, car exhaust and/or fireplace smoke) that cause us to have allergic reactions. However, sometimes even our immune system is not strong enough to defend against these allergens. Allergena is a Homeopathic Sublingual Immunotherapy that reduces the body's negative reaction to allergens. Our homeopathic allergy drops build immunity by exposing your body in micro doses to whatever it is that you are allergic to. This way, the body becomes safely conditioned to tolerate the allergens that previously brought on allergic reactions, and ultimately reduce allergic symptoms. Below are a few definitions to give you a better idea of how Allergena works:

- Sublingual: Underneath the tongue.
- Immunotherapy: Treatment to stimulate or restore the ability of the immune (defense) system to fight infection and disease. Allergy shots are another form of Immunotherapy.

How long before Allergena begins "working"?

Some users experience relief within hours. Others realize a reduction of symptoms between one to eight weeks.

How long should I continue to take Allergena?

Frequent administration of Allergena is essential to building immunity. Recommended dosage for adults (12 and Older) is 12-15 drops under the tongue, four to six times daily. Children (7-12 years) 9 drops under the tongue. Children (2-7 years) 6 drops under the tongue. Infants (0-2 years) 3 drops. Allow drops to be absorbed orally, then swallow. During an acute allergy attack, take every half hour.

Are there any side effects?

There are no known side effects. For extreme sufferers, heightened allergic reaction may occur following administration of Allergena. Do not be alarmed at this response. If you experience a headache after taking Allergena, decrease dose to a tolerable level. Then increase dose slowly over a period of two weeks.

Can I take Allergena with other medications?

Yes. There are no known adverse drug interactions.

What is Sublingual Immunotherapy (SLIT)?

Sublingual Immunotherapy is a method of allergy treatment that uses an allergen solution given under the tongue. Over time, sensitivity to allergens are reduced. In 1998 the World Health Organization concluded that Sublingual Immunotherapy was a viable alternative to the injection route and that its use in clinical practice is justified.

Bousquet J, Lockey R, Malling H (1998). "Allergen immunotherapy: therapeutic vaccines for allergic diseases. A WHO position paper". J Allergy Clin Immunol 102 (4 Pt 1): 558-62.
