

ALLERGENA™

Mold Mix

Allergy Relief from Molds & Fungi*

- Homeopathic Sublingual Immunotherapy
- Builds a strong immune system to help fight allergies*
- Non-drowsy, no side effects and no drug interactions*
- No GMOs and No Gluten
- Alleviates runny nose, sneezing, congestion, sinus pressure, itchy & watery eyes*
- Contains herbal drainage remedies to enhance the drainage process and remove antigen residue*
- Additional immune support provided from Echinacea*

NET 1 FL. OZ. (30ml)
& NET 2 FL. OZ. (60ml)

Molds live everywhere.

If you have an allergy that doesn't end when the seasons change, your symptoms may be caused by mold allergy

- Mold and mildew are fungi.
- Seeds from mold called spores are released when humidity is high.
- Some spores are released in dry windy weather outdoors or spread by circulating air indoors.
- Inhaling the spores causes allergic reactions in some people.

Outdoor Molds:

- Many molds grow on rotting logs and fallen leaves, in compost piles, grasses and grains.
- Unlike pollens, molds do not die with the first killing frost.
- Many molds originate outdoors and are carried into the home.

Indoor Molds:

- Fungi grow in damp areas, particularly in the bathroom, kitchen, basement or other damp areas.
- High mold levels have been reported in homes affected by floods, leaks, burst pipes and high humidity.

Frequently Asked Questions

How does Allergena Mold Mix work?

The immune system defends us against disease. When harmful substances are detected, such as pollens, the immune system creates antibodies, which destroy or neutralize allergens (i.e. pollens, dust and/or mold) that cause us to have allergic reactions. However, sometimes even our immune system is not strong enough to defend against these allergens. Allergena is a Homeopathic Sublingual Immunotherapy that reduces the body's negative reaction to allergens. Our homeopathic allergy drops build immunity by exposing your body in micro doses to whatever it is that you are allergic to. This way, the body becomes safely conditioned to tolerate the allergens that previously brought on allergic reactions, and ultimately reduce allergic symptoms. Below are a few definitions to give you a better idea of how Allergena works:

- Sublingual: Underneath the tongue.
- Immunotherapy: Treatment to stimulate or restore the ability of the immune (defense) system to fight infection and disease. Allergy shots are another form of Immunotherapy.

Why are drainage remedies included?

Our specific herbal remedies enhance drainage of foreign particles which accumulate in the lymph system.

How long before Allergena begins “working”?

Some users experience relief within hours. Others realize a reduction of symptoms between one to eight weeks.

How long should I continue to take Allergena?

Frequent administration of Allergena is essential to building immunity. Recommended dosage for adults is 10-15 drops under the tongue, 3 times daily. Children (age 2-12), 6-10 drops under the tongue, 3 times daily, before or after meals. Allow drops to be absorbed orally, then swallow. **Acute allergy attack:** Administer 5-8 drops per hour, in addition to 3 times daily.

Severe and long-term allergy sufferers?

Pre-Season: Begin Allergena one to two weeks before the allergy season at half the recommended dosage, 3 times daily. **During Allergy Season:** Increase to your recommended dosage. **Post-Season:** For best results, reduce your recommended dosage to half, once daily for the two weeks following the allergy season.

Are there any side effects?

There are no known side effects. For extreme sufferers, heightened allergic reaction may occur following administration of Allergena. Do not be alarmed at this response. If you experience a headache after taking Allergena decrease dose to a tolerable level. Then increase dose slowly over a period of two weeks.

Can I take Allergena with other medications?

Yes. There are no known adverse drug interactions.

What is Sublingual Immunotherapy (SLIT)?

Sublingual Immunotherapy is a method of allergy treatment that uses an allergen solution given under the tongue. Over time, sensitivity to allergens are reduced. In 1998 the World Health Organization concluded that Sublingual Immunotherapy was a viable alternative to the injection route and that its use in clinical practice is justified.

Bousquet J, Lockey R, Malling H (1998). "Allergen immunotherapy: therapeutic vaccines for allergic diseases. A WHO position paper". J Allergy Clin Immunol 102 (4 Pt 1): 558-62.
