**DISCLAIMER:** Local allergens listed are immunologically reactive with the standard homeopathic antigen formulation used in this and other Allergena products.
Frequently Asked Questions

How does Allergena Texas Cedar Fever work?
The immune system defends us against disease. When harmful substances are detected, such as pollens, the immune system creates antibodies, which destroy or neutralize allergens (i.e. pollens, dust and/or mold) that cause us to have allergic reactions. However, sometimes even our immune system is not strong enough to defend against these allergens. Allergena is a Homeopathic Sublingual Immunotherapy that reduces the body's negative reaction to allergens. Our homeopathic allergy drops build immunity by exposing your body in micro doses to whatever it is that you are allergic to. This way, the body becomes safely conditioned to tolerate the allergens that previously brought on allergic reactions, and ultimately reduce allergic symptoms. Below are a few definitions to give you a better idea of how Allergena works:

- **Sublingual**: Underneath the tongue.
- **Immunotherapy**: Treatment to stimulate or restore the ability of the immune (defense) system to fight infection and disease. Allergy shots are another form of Immunotherapy.

What is "Texas Cedar Fever"?
Cedar Fever is part of being a Texan. It is the dreaded allergy symptoms brought on by the pollinating cedar tree, Mountain Cedar (Juniperus ashei). Mountain Cedar is the most allergenic tree in Central Texas. National Allergy Bureau data shows that cedar pollen appears as early as October and seen as late as May. Allergena Texas Cedar Fever formula ensures your body builds immunity to the Cedar that makes you miserable.

Why are drainage remedies included?
Our specific herbal remedies enhance drainage of foreign particles which accumulate in the lymph system.

How long before Allergena begins “working”?
Some users experience relief within hours. Others realize a reduction of symptoms between one to eight weeks.

How long should I continue to take Allergena?
Frequent administration of Allergena is essential to building immunity. Recommended dosage for adults is 10-15 drops under the tongue, 3 times daily. Recommended dosage for children (age 2-12), 6-10 drops under the tongue, 3 times daily, before or after meals. Infants (age 0-2), 3-5 drops 3 times daily, before or after meals. If possible, allow drops to be absorbed orally, then swallow. Acute allergy attack: Administer half the recommended dosage of drops per hour, in addition to 3 times daily.

Severe and long-term allergy sufferers?
**Pre-Season**: Begin Allergena one to two weeks before the allergy season at half the recommended dosage, 3 times daily. **During Allergy Season**: Increase to your recommended dosage. **Post-Season**: For best results, reduce your recommended dosage to half, once daily for the two weeks following the allergy season.

Are there any side effects?
There are no known side effects. For extreme sufferers, heightened allergic reaction may occur following administration of Allergena. Do not be alarmed at this response. If you experience a headache after taking Allergena decrease dose to a tolerable level. Then increase dose slowly over a period of two weeks.

Can I take Allergena with other medications?
Yes. There are no known adverse drug interactions.

What is Sublingual Immunotherapy (SLIT)?
Sublingual Immunotherapy is a method of allergy treatment that uses an allergen solution given under the tongue. Over time, sensitivity to allergens are reduced. In 1998 the World Health Organization concluded that Sublingual Immunotherapy was a viable alternative to the injection route and that its use in clinical practice is justified.
