Chamomile is an official drug in the pharmacopoeias of twenty-six countries, and its uses today differ little from those of ancient times. Chamomile is used extensively as an antispasmodic, calmative, digestive aid and carminative. It has been used for centuries to provide healthier gastrointestinal structure and function.

Over the past 30 years, extensive scientific investigations have confirmed its traditional and current uses. Chamomile is official in the German Pharmacopoeia and is an approved herb in the Commission E monographs. It is used as a monopreparation and as an active component of more than 90 licensed prepared medicines.
